SIGMADESIGN is ISO 9001:2015 Certified

(April 8, 2020) – As of April 8, 2020, **SIGMA**DESIGN is certified ISO 9001:2015. The company worked hard to achieve ISO 9001:2015 certification in order to help support growth, continue to produce high-quality deliverables, and open up services to additional market sectors. ISO 9001:2015 certification focuses on quality systems management, emphasizing risk analysis and management. Improving company processes provides a path for continuous improvement in meeting project requirements consistently and engaging in best practices.

ABOUT ISO

The International Organization of Standardization, otherwise known as ISO, is comprised of experts from over 164 countries that instituted best practices for products, services, and systems. Established in 1946, they have published over 22,000 standards across nearly every industry, from food safety to environmental management. To be certified to an ISO standard is recognition that a business is engaging in best practices in a specific area.

Obtaining certification is not the end of the ISO process. ISO certification continues on a 3 year cycle. "Year 1" starts with the certifying audit, "Year 2" includes a surveillance 1 audit, and "Year 3" a second surveillance audit is conducted. Then, the process starts all over again. In reality, the ISO certification process continues annually with every third year being a deeper dive into the details.

Attaining ISO certification 9001:2015 has been a rewarding experience, one that has contributed to an increase in efficiency and organization for **SIGMA**DESIGN's processes. We will continue to maintain the level of standards required to keep this certification, and consider the pursuit of additional certifications in the future as well.
